ZyPerHD
IP VIDEO DISTRIBUTION SYSTEM
User Manual
Updated May 2021
Document symbol conventions:

- Indicates an important piece of information affecting the operation of the unit. Retain this information.

- Indicates a point of caution. Failure to heed this information may cause a hazard of some form to the operator or others in the field of operation.

- Indicates a point regarding the electrical safety of the box. Failure to abide by the information presented may result in an electrical shock hazard to the operator or others in the field of operation.

- Indicate a point affecting the RF performance of the box. Failure to heed or abide by the information presented may result in emissions or susceptibility that can affect the unit or nearby equipment. Performance conforming to the regulatory limit may be compromised or affected.

About ZeeVee:
ZeeVee is the leading manufacturer of high-quality encoder/modulator/decoder products for video distribution over any type of transmission media; be it RF coax, fiber, or copper ethernet.

Established in 2007, ZeeVee has been manufacturing industry-leading products while operating the company responsibly in compliance with the strictest levels of regulatory and environmental requirements. The standards by which we govern our corporate conduct are far higher than that required by law.

Our mission is to completely fulfill the toughest customer application requirements with the highest quality products we can produce. After the sale, we strive to support the customer with award-winning support and service. Our goal is that no customer shall be ever be dissatisfied. It is both our mission and our passion.

System Description

The ZyPerHD series of products from ZeeVee provide a means for transmitting and receiving audio-visual information across a standard IP network with outstanding quality at very low latencies.

**A minimal system consists of:**

- Video Source
- ZyPerHD Encoder device
- CatX Cable
- ZyPerHD Decoder device
- Video sink (display device)

**A fully realized system consists of:**

- (N) Video Sources
- (N) ZyPerHD Encoder devices
- 1Gb Ethernet switching Infrastructure (> (N+M) ports of non-blocking capacity)
- (M) ZyPerHD Decoder devices
- (M) Video sink (display devices)
- ZyPerMP control node
System Elements

Encoder Function

The function of the ZyPerHD Encoder Device (Encoder) is to accept audio and video data over HDMI, and translate that data to a format suitable for transmission over a standard 1Gb Ethernet network.

Video data is segmented, compressed, prepared for transmission, and sent by the Encoder unit. No unit other than those so designated by the control entity shall be able to receive the video stream sent by an Encoder.

The format of the IP data is fully in compliance with industry-standard IEEE 802.3 Ethernet networking practices. Nearly any switch or device capable of passing 1Gb Ethernet traffic can be employed to carry ZyPerHD A/V traffic.

Other ports on the Encoder devices are for the carriage of RS232 and audio data.

Common Interfaces on all Encoders:

- Power Input (12VDC)
- RS232 Input/Output
- Analog Audio Output
- HDMI Input
- 1Gb Ethernet port (RJ45 with PoE)

Decoder Function

The function of the ZyPerHD Decoder device (Decoder) is to accept 1Gb Ethernet traffic that represents the information to be decoded, decompressed and displayed. When the appropriate IP stream is received the Decoder unit will reformat the video and audio information for display and plays it out its HDMI video output. Audio is also played out the appropriate port as included.

Other ports on the Decoder devices are for the carriage of RS232 and audio data.

Common Interfaces on all Decoders:

- HDMI Output
- 1Gb Ethernet (RJ45 with PoE)
- Analog Audio Output
- RS232 Input/Output
- Power Input (12VDC)
Management Platform

All installations will require a ZyPer Management Platform (ZMP). This device controls the operation and manages the connectivity between endpoints. The management platform is a hardened controller node that must reside on the same logical network as the ZyPerHD Encoders and Decoders. It runs a ZeeVee application as its sole function. The application presents an API to potential third party management platforms as well as hosting its own management application.

All installations including point-to-point require a ZMP.

The purpose of the Management Platform is to interface user operational requests into the specific device-level control needed to effect connectivity changes, screen management, interface management, and distribute software and control data to all the endpoints of the overall system. The ZyPerMP is the entity that insures all the endpoints, are accounted for, operating properly, and performing the correct operation at the correct time.

Further, the ZMP is the element that guarantees security, manages access to the overall system and prevents rogue listeners or observers from snooping or spoofing unwanted content.

Operation of the ZMP, the management application, and the ZyPer-API are beyond the scope of this manual and are documented separately in far greater detail in the ZyPer Management Platform User Manual. Documentation can be downloaded from the ZeeVee website.

Switch Requirements

When the ZyPerHD series deliver compressed 1080 video, momentary transfer rates may reach as high as 20 Mbps, which requires a gigabit Ethernet switch.

Switches must support the following features:

- Multicast forwarding or filtering
- IGMP Snooping
- IGMP Querier

Configure switches features based on the table below:

<table>
<thead>
<tr>
<th>Feature of Switch</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>

<td>IGMP snooping fast leave</td>
<td>Enable</td>
</tr>
<tr>
<td>Validate IGMP IP Header</td>
<td>Disable</td>
</tr>
<tr>
<td>Dynamic multicast router port</td>
<td>Disable</td>
</tr>
</tbody>
</table>

Note: Different brands of models of switches may have different names of the previous features.

See the ZyPerHD Network Requirements document for additional details on this topic.

https://www.zeevee.com/documentation-all-products
Setting up ZyPerHD

A many to many, or switched environment involves connecting many sources to many displays. ZyPerHD allows you a flexible and scalable amount of input-output options without limitations. For example, in a 24-port configuration, you can configure a 1x23, 6x18, or 4x20 (and so on) system. A network switch is needed in these many to many configurations. These environments also require configuration through the ZyPerHD management software.

To set up ZyPerHD in a many to many environment, you have to:

- Install ZyPerHD management software
- Connect all Encoders and Decoders to the 1Gb network switch
- Switch (or route) video from sources to displays

Please consult the ZyPer Management Platform User Manual for additional details on switching/routing video from sources to displays.

https://www.zeevee.com/documentation-all-products
ZyPerHD

To set up ZyPerHD in a point-to-point environment, you have to:

• Install ZyPerHD management software (ZyPerMP)
• Connect the Encoder and Decoder to the 1Gb network switch
• Switch (or route) video from source to display
• Disconnect the Encoder and Decoder from the 1Gb network switch
• Connect the Encoder and Decoder to each other via the network cable
Device Technical Specifications

Encoder and Decoder HDMI Video Specifications

All encoders and decoders have one exposed HDMI port. There is an input and output on the encoder and an output on the decoder. All the parameters in terms of the formats of video and audio carried are the same for either.

General Safety and Care Instructions

Safety

**WARNING:** When using electronic products, basic precautions should always be followed, including:

- Keep these instructions.
- Heed all warnings.
- Follow all instructions.
- Do not use this apparatus near water.
- Clean only with in accordance with cleaning instructions included in this manual.
- Do not block any ventilation openings. Install in accordance with the manufacturer’s instructions for spacing and clearance to allow proper airflow.
- Do not install or place this product near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
- Do not defeat the safety purpose of the grounding-type plug. A grounding type plug has two blades and a third grounding prong. The third prong is provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
- Power cord must be accessible to allow for the removal of the power from the unit.
- Protect the power cord from being walked on or pinched, particularly at plugs, convenience receptacles, and the point where cords exit from the apparatus.
- Unplug this apparatus during lightning storms.
- Unplug this apparatus when unused for long periods of time.
- Only use attachments/accessories supplied or specified by the manufacturer.
- Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or excessive moisture, does not operate normally, or has been dropped.

**WARNING:** To reduce the risk of fire or electric shock do not operate this apparatus in a position where it is exposed to dripping or splashing liquids, rain, moisture, or excessively high humidity. Objects containing liquid shall not be placed in proximity to the unit such that they present a risk of spillage onto the apparatus.
ZyPerHD

**Shock and Fire Hazard:**
The unit's metal case, power supply, and grounding terminals and lugs are essential in containing radio energy as well as safeguarding the user from any risk of electrical shock. The metal shell of the unit protects the internal circuitry from environmentally induced over stress conditions and is an integral part of the compliant system.

**WARNING:** Do not open the box or in any way expose the internal circuitry.

**WARNING:** There are no user-serviceable parts inside the unit. Opening or damaging the ZyPerHD unit in any way voids the warranty and immediately nullifies any assertion of regulatory compliance made by ZeeVee. Any required service shall be performed by trained and qualified service personnel authorized by ZeeVee.
Cleaning

Encoder, Decoder and ZyPerMP Unit Cleaning Procedures

Before cleaning:

1. Switch off or fully disconnect the AC power from the external supply unit connector to the ZyPer unit.
2. If the state of the AC power cannot be established, disconnect the DC input plug from the ZyPer unit before proceeding.

Cleaning Procedure:

1. Any unused cable receptacles should be covered with the supplied rubber plugs or a piece of tape to prevent cleaner from entering and possibly affecting operation.

2. Clean the exterior of the unit with a soft cotton cloth that has been lightly moistened with an approved and recognized cleaning agent.

The exterior of the unit has been tested for compatibility with, and resistance to, the following products:

✦ Alcohol (Isopropyl and Ethyl)
✦ Ammonia-based cleaners (Windex)

In case none of the above cleaning products is available, water may be used.
Care should be taken to not spray cleaner directly on to the unit or into the vents to avoid liquid ingress and damage to the internal electronics.

**CAUTION:** Do not apply or spray liquid directly on to the unit’s exterior as excess liquid may cause damage to internal electronics. Apply the liquid to the cleaning cloth first.

3. Repeat with water-moistened cloth only.

4. Wipe with a dry cloth

5. Air vents shall be checked to make sure that they are free of accumulated lint or blockages.

   Should the air vents appear clogged use a vacuum cleaner with a soft-bristle brush attachment to loosen and draw the debris out of the vents and away from the unit.

   Do not loosen and blow the debris in to the unit as internal buildup of debris will degrade the ability of the unit to cool itself and reliability may be adversely affected.

Do not apply power if there is any evidence of fluid in the interior of the unit.

**ZyPerMP Specific Cleaning Procedure**

The ZyPerMP control unit is not designed to be placed in an environment that would subject it to impurities that require as frequent cleaning as the encoder and decoder units. Should the ZyPerMP unit need cleaning, the same procedures apply as enumerated above, only a very sparing amount of cleaner should be applied to the cleaning cloth.
Important Siting and Application Considerations

ZyPerHD Equipment Type and Uses

ZyPerHD Intended Uses

- Equipment is intended for the distribution of Audio Visual Information in and around a facility.
- Equipment is intended to distribute Human Interface and control information over the same network as the Audio Visual information following the same or different logical distribution paths.
- Equipment does not generate video information itself, but accepts and distributes video information from industry-standard devices which generate such audio visual information.
- Equipment is intended for the sophisticated display and presentation of decoded information that has been distributed by companion ZyPerHD equipment.
- Equipment is intended to be controlled from a central control node (the ZyPerMP) which ties in to a customer control system for sophisticated presentation and management of the information flow and direction.

WARNING: The installer should test and validate a complete setup with the actual devices before deploying to a final production installation.
Installation Environment

The general area where the ZyPerHD unit is to be installed shall be clean and free of obstructions or clutter.

Mounting Options

- Unit may be mounted horizontally on the installed rubber feet
- Unit may be bolted to a horizontal surface using the provided L-brackets with or without feet installed.
- Unit may be mounted vertically only if appropriate clearance is provided around the grille work for adequate airflow. The appropriate ZyPerHD rack mount kits insure that airflow space is sufficient when mounting vertically.
- Units may be stacked in a horizontal orientation providing stack is no higher than 3 units when using the provided rubber feet
  - Greater stacking requires that the user remove the rubber feet and externally bracing the stack of units.
- In all cases, insure that the units are rigidly held in place and will not be subject to impact and there is no possibility of toppling.
- Do not stack any other equipment or devices on top of the unit weighing more than 3Kg and only if sufficient bracing is provided to protect against toppling.

**WARNING:** Failure to adhere to these recommendation could result in unsafe operation, damage to the equipment, or injury to the operators.

Ventilation

Ambient environmental temperature and humidity shall not exceed that specified in the Detailed Specifications portion of this document.

Ambient temperature in this case refers to the temperature of air entering the device through the ventilation grille. Care should be taken to not enclose the device or deploy in an fashion where airflow loops or local “hot spots” can cause the inlet air to rise above the specified limit for normal operation.

In general 25mm (= 1inch) of clearance should be provided around the ventilation openings unless an external air mover insures that the inlet temperature is at or below the specified limit.

If the equipment is mounted in an enclosed cabinet, it is the job of the installer to insure that within the cabinet or enclosure the ZyPerHD equipment does not experience local temperatures in excess of that specified in the Detailed Specifications portion of this document.
ZyPerHD

Water and moisture

Never expose the ZyPerHD unit to direct rain, moisture, or excessively high humidity.

Never use the device near water - e.g. near a bathtub, basin, pool, sink, or in a wet basement.

Clean only in accordance with the instructions in this manual.
**AC Mains Connection**

The ZyPerHD Encoder and Decoder units are powered through an external AC/DC converter unit or via the Ethernet PoE feature.

If PoE is not available, the Encoder and Decoder units must be powered and connected using the supplied external AC/DC converter. The voltage supplied to the Encoder and Decoder units from the external supply is 12VDC at less than 1.0A.

- Do not substitute the supplied AC/DC power supply unit with another component. The overall system compliance is dependent on each of the provided elements being present and operational.

**INFORMATION:** The introduction of a foreign, non-ZeeVee element nullifies any claim of regulatory compliance asserted by ZeeVee.

The AC/DC power supply shall be powered from the appropriately rated AC mains voltage which allows for a wide range of input, generally from 100VAC through 240VAC.

Only use a power cord with an appropriately rated protective earth connection. The protective earth connection is essential to the overall safety of the system.

**WARNING:** Bypassing or omitting the protective earth connection increases the risk of electrical shock and radio emissions

Install the equipment in such a manner as the IEC power cord ingress in to the AC/DC adapter is accessible as this is the boundary of the AC mains system and the point at which the ZyPerHD equipment is disconnected from the AC mains power if needed.

The equipment should be installed as near as is practicable to an AC outlet.

- Do not substitute or extend the DC cable from the AC/DC unit.

The ZyPerHD system is intended and rated for continuous operation.

Should the ZyPerHD equipment be unused for an extended period of time it should be disconnected from the AC mains at the AC inlet to the external AC/DC converter in order to protect the equipment from transient over-voltage conditions.
AC Power Cord

Connect the external AC/DC supply unit to the AC mains with a UL-listed detachable power cord, 3-wire, type SJ or equivalent, 18 AWG min., rated 250 V min., plug 5-15P configuration for 120V application, or 6-15P for 240V application.

AC/DC converter inlet side of AC cord shall be of type IEC320C13

- Do not overload wall outlets and extension cords.

Power cords should be routed so that they are not likely to be walked upon or pinched by items placed upon or compressing them.

Match the rating of the power cord to the voltage of the power outlet in accordance with the specific requirements and in compliance with safety standard of your particular country.
Responsibility and Stewardship

ZeeVee is committed to using the planet’s resources efficiently and having as little negative impact on the environment and health of mankind as possible.

Our products consume very little energy and attempt to provide the highest level of function for the smallest investment in resources.

Reduction of Hazardous Substances (RoHS)

Product Lines:

*ZyPer Products supplied by ZeeVee, Inc.*

Be advised that based on the information available to ZeeVee from our component and sub-assembly providers, the product lines listed above do not contain as intentional additives, any of the referenced materials at the levels indicated, as referenced in the subject EU directives. To the best of our knowledge, none of these materials are generated during production and the supplied component parts of the ZeeVee products do not contain the listed materials. Since we do not expect these materials to be present, we do not specifically run a complete analysis on all finished goods, excepting for periodically auditing the finished goods and component materials in certain circumstances.

This information is believed to be accurate and refers to the laws, regulations and products at the date of issue. However, ZeeVee makes no express or implied representations or warranties with respect to the information contained herein. It is the responsibility of our customers to determine that their use of ZeeVee products is safe, lawful, and technically suitable for their applications. Because of possible changes in the laws and regulations, we cannot guarantee that the status of the listed products will remain unchanged.

Waste Electrical and Electronic Equipment

WEEE Directive 2012/19/EU on waste electrical and electronic equipment

The WEEE Directives (2008/98/EC and 2012/19/EU) place an obligation on electrical equipment manufacturers and importers to recycle electronic products at the end of their useful life.
ZyPerHD

ZeeVee products that are marked with the WEEE symbol (see left) indicate that the product must NOT be disposed of with other household waste. Instead, it is the user’s responsibility to dispose of their waste electrical and electronic equipment by handing it over to an approved re-processor or by returning it an authorized agent of ZeeVee or their distributor for recycling. To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate these items from other types of waste and recycle them responsibly.

For more information about the recycling of this product, please contact your local waste disposal authorities or local municipal waste disposal service.

For specific questions related to WEEE compliance of ZeeVee products contact: support@zeevee.com

This information is believed to be accurate and refers to the laws, regulations and products at the date of issue. However, ZeeVee makes no express or implied representations or warranties with respect to the information contained herein. It is the responsibility of our customers to determine that their use of ZeeVee products is safe, lawful, and technically suitable for their applications. Because of possible changes in the laws and regulations, we cannot guarantee that the status of the listed products will remain unchanged.

ZeeVee, Inc.
295 Foster Street, Littleton, MA 01460
FCC Compliance Statement

The ZyPerHD family of devices has been tested and found to comply with the limits for Class A Digital Devices pursuant to Part 15 of the FCC Rules. Operation is subject to the following conditions: 1) these devices may not cause harmful interference, and 2) these devices must accept any interference received including interference that may cause undesired operation.

This equipment generates, uses, and can radiate radio frequency energy and, if not installed or used in accordance with the instructions, may cause harmful interference to radio communications. However there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

1. reorient or relocate the receiving antenna
2. increase the separation between the equipment and the receiver
3. connect the equipment to an outlet on a circuit different from that to which the receiver is connected
4. consult the dealer or an experienced radio/TV technician for help.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment. Where shielded interface cables have been provided with the product or specified additional components or accessories elsewhere defined to be used with the installation of the product, they must be used in order to ensure compliance with FCC regulations.

In order to insure compliance with the referenced FCC regulations, only deploy the equipment with provided or approved accessories in the manner indicated in this and other pertinent manuals.

Use only approved and properly shielded cables of good quality.

Address any inquiries to:

ZeeVee, Inc.
295 Foster Street, Suite 200
Littleton, MA 01462
EMC Information

The ZyPerHD devices should be mounted and operated in accordance with the guidelines specified in this guide to maintain the integrity of the expected EMC characteristics.

The supplied Power Supply (AC/DC Conversion unit) should be used. Any other AC/DC supply has not been tested or verified to perform at the levels indicated in this manual.

Media cables are not provided and the ZyPerHD devices are generally fairly tolerant of different types and manufacture styles.

- Media cables should be of good quality and rated for the performance levels of the interface to which they are connected.
  - e.g. HDMI ports should only be connected to HDMI cables rated for 1080p60 operation at the desired resolutions.
- HDMI cables shall be of the type incorporating integral Ferrite cores in order to achieve rated compliance levels and the cleanest electromagnetic environment in the vicinity of the unit.
